ABOUT

I am a software engineer with **8 years of experience** software development. Experience with **Python, Django, Rest API, Unit Testing, SQL, Docker, full stack web development and refactoring**. I also have knowledge and experience (1+ year) with AWS (S3, Lambda, VPC, EC2), PHP and Symfony, but I definitely prefer work with Python.

Highly skilled in leadership, proactive, responsible and self-motivated. Along with these skills I worked as a Chief Technology Officer (CTO) in Colon's town hall.

I am looking forward to bringing these skills to a new position as a full-stack developer.
